Exploring Bugs!

We are bugging out in this month's Life Study. The students are learning about the different insects they see everyday in English. They are also learning about the different stages of a bug's life cycle. Everyone sang a catchy song, looked at a video of a life cycle of the butterfly, and made a life cycle craft.

The students used different types of paper to create each cycle. The crumble paper to make the egg, they used tissue paper to make the caterpillar and chrysalis, and they drew their own beautiful butterfly. The students were creative in designing their own caterpillars and butterflies. It was a memorable experience in learning the butterfly's life cycle!
